ANS 2000+ AUTOCOCKER FRONT BLOCK KIT

This complete Pneumatic Kit #3 comes with the Jackhammer, 3-way, stainless steel ram, front x-block, and the Stainless Steel Extended Block Screw. These parts are made from machined 6061(T6) anodized aluminum and 404 stainless steel. The kit is fully assembled for easy installation. All barb fittings are nickel plated brass. The combination of low pressure design and custom designed fittings of this pneumatic kit allows for hose-clamp-free pneumatic hose.

PARTS

ANS QUICK PULL VENTURI BOLT

The Quick-Pull Venturi Bolt has a 360 degree cut which allows for maximum gas flow and variable bolt position when the bearings are locked in. The 16 hole venturi tip provides full support and the most even air flow around the ball. This means less ball breakage and longer, straighter shots. You can also easily remove the bolt with one press of the push button. This bolt is made from machined 6061 (t6) anodized aluminum. The internal push button and ball bearing are 404 stainless steel.

STAINLESS STEEL PUMP ROD

Get rid of that dull, fragile stock aluminum pump rod. Move up to the stainless steel rod. It is much more durable and looks sweet.
