Lengths for A-5, Autococker, Angel (Available only in Blue, Black or Red), Model 98 (Available only in Black or Silver),  
Spyder

# 32 DEGREES

## QUIET RIOT BARREL

Originally intended as an upgrade barrel, this baby has been standing on its own, surprising even us with its performance and popularity. Its unique design helps muffle barrel response and gives the ball less wobble than in other comparable markers.

Silver 12"

Silver 14"

Black 14"

Blue 12"

Lengths for Model 98 (Available only in 12" Silver, 14" Black or Silver), Spyder (Available only in 12" Blue)

## CARBON FIBER BARREL

Carbon fiber composites have amazing structural properties. In comparison to aluminum, carbon fiber composites are eight times stronger, two times stiffer, yet still 1.5 times lighter. When coupled with the proper resins, carbon fiber composites are one of the slickest, most resistant materials available. Why is this good for a paintball barrel? The light weight helps in balancing the gun unlike heavier stainless barrels. The barrel is stronger than aluminum barrels, and the interior of this barrel is stick free so if any paint break in the barrel you can be assured that one squeegee pull will eliminate all left over paint residues.

Lengths for Spyder 14" Stainless

## NIGHT STICK BARREL

32 Degrees has outdone themselves again with this affordable, high quality upgrade barrel. The combination of spireal porting and muzzle break helps to increase accuracy by decreasing the turbulence the ball has to travel through inside the barrel. Available in black only, with the option of 12 or 14 inch. For a great price and outstanding performance, 32 Degrees has been leading the industry in parts, barrels, and markers! Definitely a high quality choice, one of the best for the price!

Lengths for Model 98 12" or 14" Aluminum

## TERMINATOR BARREL

The Terminator barrel is made out of black anodized aluminum that combines muzzle break technology with external porting that increases overall range and accuracy. This is another sleeper from 32 Degrees, with its deceptively simple yet sleek design, and a surprisingly low cost makes it a great barrel to have in your kit... Get in touch with us to find out more about this great barrel.

Available in 10", 12", 14", or 16" (Black, Silver)  
 Lengths for Autococker (Available only in 14" Silver or Black), Automag (Available only in 14" Black), Angel (Available only in 14" Black), Model 98 (Available only in 12", 14", 16" Black, 14" Silver), Pro-Carbine (Available only in 14" Black), Raptor (Available only in 12", 14" Black), Spyder (Available only in 10", 12", 14", 16" Black)

## CERAMIC BARREL

These barrels use the most advanced technology available today. While the ceramic is being applied teflon is injected into the pores of the aluminum, resulting in the slickest yet most durable surface in the world. These barrels are quiet, light, and accurate. Barrels are available in 12" and 14" lengths.

12"

14"

16"

12", 14", or 16"  
Lengths for Autococker, Automag, Angel, Impulse, Model 98 (Available in 16"), Pro-lite/A-5 (Available in 16"), Puma, Shocker, and Spyder (Available in 16")

## XCEL ALUMINUM BARREL

The DYE Xcel barrel is a popular favorite of the top pros today. The Xcel is chosen for its all aluminum light weight advantage. It is also a very popular custom barrel because its aluminum construction offers the ability to be anodized to match any gun color. It is made with the same precision quality that you can expect from DYE as the leader in barrel manufacturing.

12"

14"

12" or 14"

Lengths for A-5, Autococker, Automag, Angel, Impulse, Model 98, and Spyder

## BOOMSTICK BARREL

The Boomstick is the flagship of the Dye barrel line. This is the most widely desired and copied barrel in the paintball industry. The boomstick is built from gun drilled surgical grade 303 stainless steel and an aircraft grade 6061 T6 aluminum. All DYE barrels are honed to a 6 micron surface finish, giving you the smoothest and straightest barrel surface on the market. The precision fit of the aluminum front combined with the stainless steel back provides one of the best shooting barrels in the world. The boomstick is the most common barrel used by professional players worldwide.

12"

16"

14"

18"

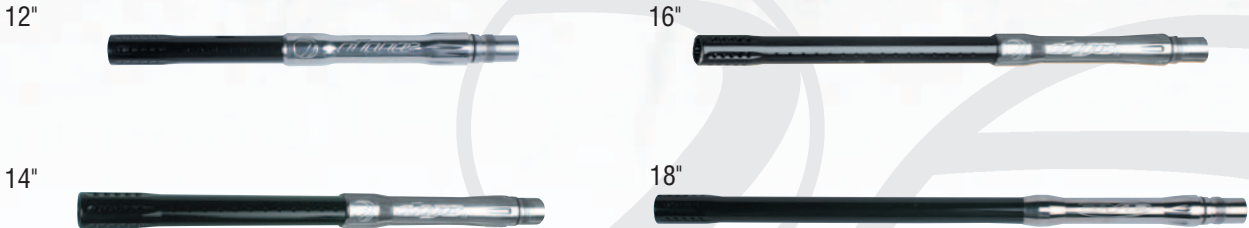

10", 12", 14", 16", or 18"

Lengths for A-5 (Available only in 12", 14", or 16"), Autococker (Available only in 12", 14", 16", or 18"), Automag, Angel, Indian Creek (Available only in 12", 14", 16", or 18"), Impulse (Available only in 12", 14", 16", or 18"), Model 98, Pro-lite (Available only in 12", 14", or 16") and Shocker, Spyder (Available only in 12", 14", 16", or 18")

## TITANIUM BOOMSTICK BARREL

The creation of the Dye Titanium Boomstick has set a precedence in paintball that has yet to be surpassed. Born in the shadow of the Boomstick and bred of a new type of thinking towards paintball, the TI-Boomstick is the only barrel in the world to utilize one of the most expensive and high-tech materials available to man - Titanium. Initially used in aerospace and military applications, titanium found its way to the mainstream and started being applied as after-market parts for expansive toys. Titanium is world renown for its exceptional strength and extreme light weight. Titanium has the weight of aluminum, yet strength exceeding that of stainless steel. The only obstacle in working with this material is the difficulty involved in machining and honing. Dye overcame these obstacles to obtain the truest and longest lasting barrel available.

12", 14", 16", or 18"  
Lengths for Angel, Indian Creek, and Spyder (Available only in 12", 14", or 16")

## BARRELS

### ULTRA LITE BARREL

12", 14", or 16"  
Lengths for Autococker, Angel, Impulse, Model 98, and Spyder

### STEALTH BARREL

The only internally rifled barrel on the market. These barrels are imported from South Africa where they are machined to exacting specs. External appearance varies by gun. Spyder and Tippmann Prolite/Carbine barrels do not have external grooves.

Available in Black 13" or 16"  
Lengths for A-5, Autococker, Alley Cat, Automag, Angel, Model 98, Pro-lite, Raptor, Shocker, and Spyder

## CMI BARREL

This CMI barrel is absolutely great for beginner players. It's an inexpensive, quality barrel, and available in multiple colors and sizes.

**CMI**

Blue - Lengths for Spyder 14" or 16"

Chrome Plated - Lengths for Spyder 14"

Black - Lengths for Carbine 14"

Red - Lengths for Spyder 14"

## BARRELS

## FLATLINE BARREL SYSTEM

Introducing the Flatline Barrel System made exclusively for the 98 Custom/Model 98/A-5. The Flatline Barrel System is the first production back spin barrel ever produced. The principle behind the system is Tippmann's newly designed slightly curved barrel, which applies centrifugal force to the ball, creating backspin. Not only does this system offer increased accuracy and distance but also offers flat trajectory for thick brush and canopy play. By minimizing trajectory of the ball and increasing accuracy, you increase the amount of targets which would ordinarily be out of range.

\*Tippmann A-5

**TIPPMANN**  
PAINTBALL - MADE IN THE U.S.A.

\*Tippmann Model 98

## SNIPER BARREL

The Tippmann sniper barrels are crafted to increase the performance of your accuracy and range of your gun. Designed by Tippmann for Tippmann.

Tippmann Pro-lite Aluminum (Available only in 14"),  
Tippmann Model 98 Aluminum (Available only in 12", 14")

## SPEEDLINE BARREL

Side-by-Side porting is a powerlyte exclusive! Side-by-Side porting makes every shot whisper quiet and stabilizes the ball by reducing spin and evenly distributing air. Each barrel is mirror honed using a multi-step honing process. Each barrel has the PL logo and bore size milled into the rear portion. Each front portion of the barrel can be removed so that lengths can be changed or custom anodizing can be done.

## BARRELS

### ARADUS ADJUSTABLE ID BARREL

The Aradus is the most sophisticated paintball delivery system ever designed with a collapsible inner sleeve that features a straight rifle system that will prevent unwanted non-linear spin on the ball, with its twist & click sizing system, you can change the size of the bore on the fly. No more changing sleeves. The bore of this single barrel can be adjusted by simply twisting & clicking the barrel into one of its 5 settings. The barrel has been tested to the marker it was made for and a custom tailored length was designed for that marker.
